Where's the line?

A guide to right versus wrong GenAI use for AI-integrated or AI-assisted assessments.

Note: Check which purposes are ticked on your assessment brief before using GenAI.

The right side Using GenAI to...	The wrong side
1. Develop ideas	
Review GenAI suggestions ➔ decide which ones are interesting and relevant ➔ use University Library search to find sources.	Review GenAI suggestions ➔ ask for GenAI summary of what a source says about a subtopic ➔ use GenAI summary in the assessment.
2. Assist with research or information gathering	
Check the sources are real and credible ➔ verify the GenAI summary against the source abstract ➔ decide whether to read the full sources or not.	Rely on the GenAI source summaries without verifying them against the original source.
3. Understand key concepts & ideas	
Read through the GenAI output ➔ make notes to boost understanding ➔ verify new understanding against lecture notes.	Quickly read through the GenAI summary ➔ decide to copy and paste large phrases from the GenAI summary into the assessment.
4. Identify trends & themes for data analysis	
Do not upload any information that is personal, sensitive or confidential ➔ Check accuracy of GenAI suggestions against original data set ➔critically evaluate findings with own original thought.	Do not verify GenAI patterns provided ➔ do not analyse the results ➔ do not gain any original thought on the data set or findings.
5. Planning & structuring	
Review the suggested structures ➔ decide which one is most appropriate ➔ make adjustments based on own subject knowledge ➔ write essay.	Ask GenAI to recommend one structure ➔ do not use own judgement or subject knowledge to make any adjustments to the structure.
6. Providing feedback on a draft	
Check the suggested improvements against the assessment criteria and own knowledge ➔ only implement accurate and relevant suggestions; ignore the rest.	Implement all of the suggestions without evaluating them for relevance or using their own judgement or subject knowledge.
7. Generate images, figures or diagrams	
Do not input information that contains personal, sensitive, confidential or copyrighted data to generate image ➔ check the image for accuracy ➔ iterate your prompt to make necessary adjustments to the image ➔ use image and cite GenAI.	Use GenAI image/ figure/ diagram without checking accuracy or citing the GenAI tool.
8. Proofread or correct grammar & spelling	
Review GenAI suggestions ➔ implement the necessary and relevant ones; ignore incorrect suggestions ➔ avoid any suggestions that include rewrites of more than 2-3 words.	Ask GenAI to rewrite the paragraph including its suggested improvements.
9. Format citations and references	
Check the sources are real and credible ➔ check the citations and references are accurate for your department's referencing style on CiteThemRight ➔ make changes to ensure accuracy before submission.	Copy and paste GenAI references into reference list ➔ do not check sources exist ➔ do not check for accurate referencing rules.
